

Approximate Outline

Chapter I. Toy models of Confinement

Lecture 1. The Polyakov Model

Lecture 2. The 't Hooft Model

Chapter II. Kinks in Two Dimensions = Particles

Lecture 3. Polynomial Model

Lecture 4. Sine-Gordon Model

Lecture 5. Sine-Gordon = Massive Thirring

Chapter III. $O(3)$ Sigma Model

Lecture 6. Isotropic Ferromagnet

Lecture 7. Asymptotic Freedom

Lecture 8. The Absence of Spontaneous Symmetry Breaking and
No Goldstone Bosons

Lecture 9. $CP(1)$: Equivalent Representation

Chapter IV. Domain Walls

Lecture 10. The Simplest Domain Walls

Lecture 11. Domain Wall Junctions

Lecture 12. Domain Walls Antigravitate

Chapter V. False Vacua

Lecture 13. False Vacuum Decay

Chapter VI. The Chiral Anomaly

Lecture 14. Two-Dimensional Schwinger Model on a Circle

Lecture 15. Two Faces of the Chiral Anomaly

Chapter VII. Vortices & Strings

Lecture 16. Vortices

Lecture 17. Strings

Chapter VIII. Magnetic Monopoles

Lecture 18. The 't Hooft-Polyakov Monopoles

Lecture 19. $SU(N)$ Monopoles, $N > 2$.

Lecture 20. Fermions & Monopoles

Chapter IX. Fermions & Topological defects

Lecture 21. Charge Fractionalization

Chapter X. Metastable Strings

Lecture 22. Decays of Metastable Strings

Chapter XI. Cosmic Strings

Lecture 23. Introduction to Cosmic Strings

Chapter XII. Large- N QCD

Lecture 24. Large N

Lecture 25. The Skyrme Model

Lecture 26. Some Other Large- N results

Chapter XIII. Instantons in the Higgs Phase

Lecture 27. Violating the Baryon Number

Lecture 28. Sphalerons

Chapter XIV. Supersymmetric Solitons

Lecture 29. Central Charges vs. Topological Charges. Long and Short Multiplets

Lecture 30. Kinks in Minimal Supersymmetry

Lecture 31. Domain Walls

Lecture 32. CP(1) model with a "Twisted" Mass from Dimensional Reduction

Lecture 33. Kinks in CP(1) at Weak Coupling

Lecture 34. SUSY Vortices

Lecture 35. SUSY Strings

Lecture 36. "Non-Abelian" Strings

Lecture 37. Strings Ending on Domain Walls

Lecture 38. SUSY monopoles

Chapter XV. Phases of the Gauge Theories

Lecture 39. Coulomb, Higgs

Lecture 40. Confinement, Oblique Confinement

Chapter XVI. Extra Dimensions

Lecture 41. The Kaluza-Klein paradigm

Lecture 42. Trapping on Topological Defects & Large Extra Dimensions

Lecture 43. Explanation of Basic Phenomenological Regularities

Lecture 44. Induced Gravity and Quasi-Localization

Lecture 45. Overview
